

# KeySafe Lock

## Intelligent security key safe with RFID technology

The KeySafe Lock can be opened only with personalized RFID proximity tags (e.g.: proximity cards, keyfobs). The KeySafe Lock holds the keys locked one by one and lets nobody to take away any of the keys unless the person has permission to pick up the key(s).

Access control and time-attendance systems

KeySafe Lock 8 on-line type with LCD display and RFID card reader

### On-line, off-line types

The **on-line** type can be monitored, managed remotely if it is connected to the computer network. The system administrator can follow the events log of the keys through network.

The **off-line** type has an inbuilt computer which makes it possible to work on its own. It is also possible to connect it into a computer network and see who and when took away which key and for how long time. The touch screen display of the inbuilt PC helps the users in the practical handling of the keys. Both versions support multiple safe system.
